

Description

We are looking to build upon our current GIS team, which means we are looking for a permanent hire. Our group has been built with tenure and we are looking for an individual with longevity in mind.

Who we are looking for

In short, we are looking for a sensible and logical individual with working knowledge of how (and just as important why) to manage GIS data – large and small, enterprise and local. An individual who can serve GIS data to both the Desktop and the Web environment for a myriad of reasons and users. We are looking for someone who is knowledgeable on current and trending data dissemination practices (including but not limited to ESRI) and one who can provide reasoning for their suggested path.

We are a GIS group so no need to provide a list of required software experience. This should be known to qualified individuals.

Who you are

You should have strong communication skills for internal and external conversations – and this obviously includes GIS strategies. You should be able to communicate on a technical level when interacting with other agencies and consultants. As well as communicate with clients and the community in a common language.

You should be honest in your abilities and qualifications. You do not have to know everything; we are a team with collective knowledge that works with a common goal. We just need to know what you know.

Who we are

We respect the work we do and who we work with. We are a group of professionals who provide practical GIS solutions to those who need them.

Community is essential for us. Our working environment is more important than one individual. No room for egos and everyone's opinion is important no matter ones title.

We commend individuals who put extra hours into their work but we are more interested in individuals who are efficient and effective - Getting the right things done at the right time is more important than grunting out a solution.

We are a group of friends who enjoy our work. This is not just a place to go between 9-5 on the weekdays but a place we enjoy spending our day - Creating quality products and creating happy clients.

If this fits you – Contact George Culver at 713 953-5032 or gculver@ljaengineering.com
